Cookies Policy

1. What are cookies?

The **GRUPSA** Website (hereinafter the Website) uses Cookies. Cookies are files sent to a browser through a web server to record the User's activities on a given website. The first purpose of Cookies is to provide the user with faster access to the selected services. In addition, Cookies personalize the services offered by the Web, facilitating and offering each user information that is of interest to them or that may be of interest to them, based on their use of the Services.

The Web uses Cookies to personalize and facilitate user navigation as much as possible. Cookies are only associated with an anonymous user and her computer and do not provide references that allow the user's personal data to be deduced. The user can configure his browser to notify and reject the installation of Cookies sent by the Web, without this affecting the user's ability to access the contents of said website. However, we point out that, in any case, the quality of operation of the website may decrease.

Registered users, who register or who have logged in, will be able to benefit from more personalized and profile-oriented services, thanks to the combination of the data stored in cookies with the personal data used at the time of registration. These users expressly authorize the use of this information for the indicated purpose, without prejudice to their right to reject or disable the use of cookies.

Likewise, the Web will be able to know all the services requested by users, so that they can facilitate or offer information appropriate to the tastes and preferences of each user.

2. What types of cookies exist?

Cookies, depending on their **Permanence**, are divided into:

Session cookies	They expire when the user closes the browser.
Persistent cookies	They expire depending on when the purpose for which they serve is fulfilled (for example, so that the user remains identified in the Services) or when they are manually deleted.

Depending on their **Owner**, they can be divided into:

Own cookies	These are those that are sent to the user's terminal equipment from a computer or domain managed by the editor itself and from which the service requested by the user is provided.
Third-party cookies	These are those that are sent to the user's terminal equipment from a computer or domain that is not managed by the editor, but by another entity that processes the data obtained through cookies.

Additionally, depending on their **Purpose**, Cookies can be classified as follows:

Performance Cookies	This type of Cookie remembers your preferences for the tools found in the services, so you do not have to reconfigure the service each time you visit. For example, this typology includes:
	Volume adjustments of video or sound players.
	The video transmission speeds that are compatible with your browser.

Geo-location Cookies	These Cookies are used to find out which country you are in when a service is requested. This Cookie is completely anonymous, and is only used to help target content to your location.

Registration Cookies	Registration Cookies are generated once the user has registered or subsequently opened his session, and are used to identify him in the services with the following objectives:
	Keep the user identified in such a way that, if he closes a service, the browser or the computer and at another time or another day re-enters said service, he will continue to be identified, thus facilitating his navigation without having to identify himself again. This functionality can be suppressed if the user presses the "close session" functionality, so that this Cookie is eliminated and the next time the user enters the service, they will have to log in to be identified.
	Check if the user is authorized to access certain services, for example, to participate in a contest.

Analytical Cookies	Every time a User visits a service, a tool from an external provider generates an Analytical Cookie on the user's computer. This Cookie, which is only generated during the visit, will serve in future visits to the Web Services to anonymously identify the visitor. The main objectives pursued are:
	Allow the anonymous identification of browsing users through the "Cookie" (identifies browsers and devices, not people) and therefore the approximate accounting of the number of visitors and their trend over time.
	Anonymously identify the most visited and therefore most attractive content for users.
	Know if the user who is accessing is new or repeat visit.
	Important: Unless the user decides to register for a Web service, the "Cookie" will never be associated with any personal data that can identify him. These Cookies will only be used for statistical purposes that help optimize the User experience on the site.

Behavioral advertising Cookies	This type of "Cookies" allows to expand the information of the advertisements shown to each anonymous user in the Web Services. Among others, the duration or frequency of display of advertising positions, the interaction with them, or the user's browsing patterns and/or shares are stored, since they help to form a profile of advertising interest. In this way, they allow us to offer advertising related to the user's interests.

Third party advertising cookies	In addition to the advertising managed by the Web in its Services, the Web offers its advertisers the option of serving ads through third parties ("AdServers"). In this way, these third parties can store Cookies sent from the Web Services from the Users' browsers, as well as access the data stored in them.

3. Are there international transfers?

You can find out about the transfers to third countries that, where appropriate, are carried out by the third parties identified in this cookie policy in their corresponding policies (see the links provided in the "Third-party cookies" section). The different mechanisms for regularizing the international transfer, if any, will be informed by said third parties.

4. How to disable Cookies?

It is usually possible to stop accepting Cookies from your browser, or to stop accepting Cookies from a particular Service.

All modern browsers allow you to change the Cookie settings. These settings are usually found in the "options" or "preferences" menu of your browser. You can also configure your browser or email manager, as well as install free plugins, to prevent Web Bugs from being downloaded when opening an email.

The Web offers guidance to the User on the steps to access the cookie configuration menu and, where appropriate, private browsing in each of the main browsers:

Internet Explorer	Tools → Internet optinos → Privacy → Settings.
	For more information, you can refer to Microsoft support or browser Help.
Microsoft Edge	Settings and more → Settings → Clear browsing data.
Firefox	Tools → Options → Privacy → History → Custom settings.
Chrome	Settings → Advanced settings → Privacy and security → Clear browsing data.
Safari	Preferencias → Seguridad.
	For more information, you can refer to Apple support or browser Help.

5. Can there be changes to the Cookies Policy?

The Website may modify this Cookies Policy based on legislative or regulatory requirements, or in order to adapt said policy to the instructions issued by the Spanish Data Protection Agency, therefore users are advised to visit it periodically.

When significant changes occur in this Cookies Policy, users will be notified either through the web or via email to registered users.
